Hinal Patel NUID - 002766180

Abhishek Singh NUID - 002703946

## **Tech Stack Used**

## **Motivation**

- One of the biggest challenges that were faced by all incoming students was finding appropriate accommodation for pursuing their master's in the USA
- It was the first time visiting Boston for most of us. Hence, all we could do was rely on word of mouth, pictures, and social media groups while looking for housing
- All students are acquainted with the chunky Whatsapp messages advertising accommodation by people looking for roommates for incoming semesters, and we decided to mitigate this problem by building an application that offers peer-to-peer housing opportunities
- This application brings the 'room poster' and 'room finder' on the same platform where each can swipe through potential options and match with potential options
- Once matched, they can chat and get to know each other and decide if they are a good fit, thus ensuring that both the 'finder' and 'poster' have found ideal matches!

## Contributions

### **Varun Shetty**

- Registration and Signup backend models
- Password hashing and profile image uploads
- Match functionality
- Swipe functionality
- Filter functionality based on preferences
- README

### Zainab K

- Login backend
- Room Poster form and preview
- Create, Read, and Update Room profiles and models
- Populating room profiles in finder frontend
- Room poster user profile functionality
- Pitch development

### **Hinal Patel**

- Login and Registration form frontend
- Dashboard icon redirections
- Homepage Ul enhancement
- Chat functionality and models
- Delete feature for user profile
- Code documentation

### **Abhishek S**

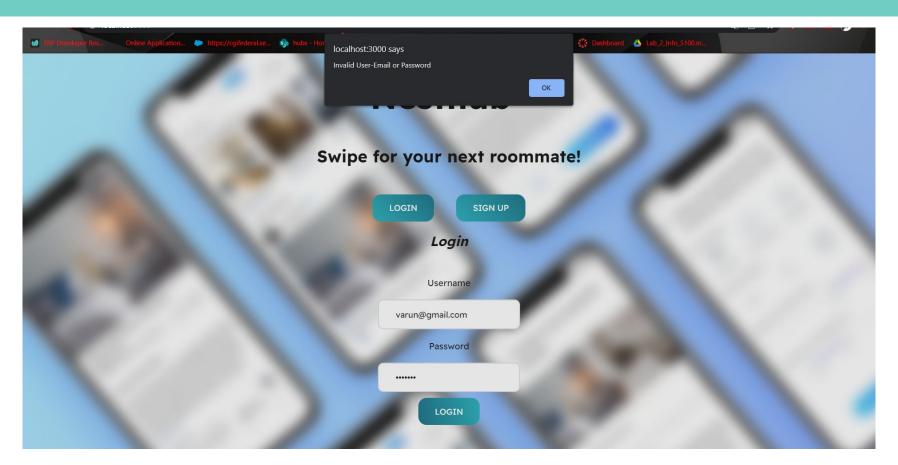

- Signup UI
- Feedback functionality
- Background styling

# APIs/Libraries/Packages Used

- Custom REST APIs for user registration, authentication, and login
- Custom REST APIs for retrieving users, deleting user profiles, and retrieving cards
- Customer REST APIs for room profile creation, view, and update
- JavaScript Object Schema Validation for user authentication
- Bcrypt, Phone-input, React-Tinder-Cards,
  FontAwesome, React-File-base64,
  React-Hook-Forms
- Cookies to persist data in the browser
- UUID for generating unique user ids

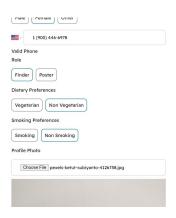

# Login/SignUp Page

# Registration Page

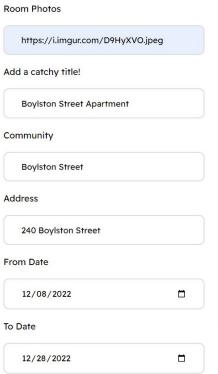

The registration form also helps in maintaining user preferences, which are used as filters in the dashboards for the finder and poster

## Room Poster Form and Preview

When the form is filled, the preview card displays the input information. Here the poster can add various details about the house, as outlined

## **Room Finder Dashboard**

Matches and chats can be viewed here

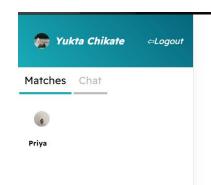

Various options such as update room, check **Room Poster** profiles, delete profile, and add feedback

The room cards are visible to the room finder

## **Room Poster Dashboard**

Matches and chat can be found here

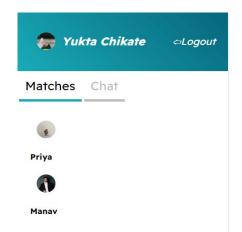

Various options such as update room, check profile, delete profile, and add feedback

The poster can view various finders and swipe through them.

# **Match Functionality Demo**

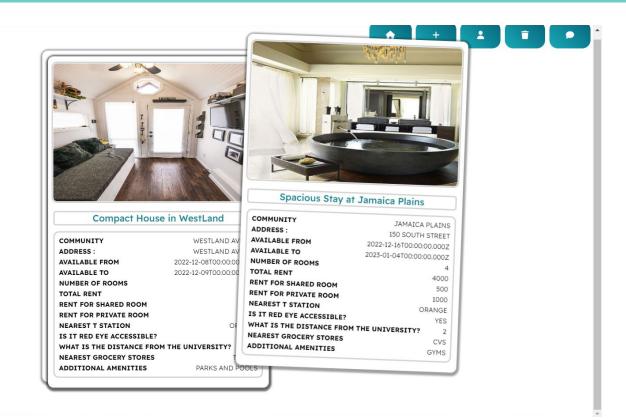

The user can view their matches and select one to chat with!

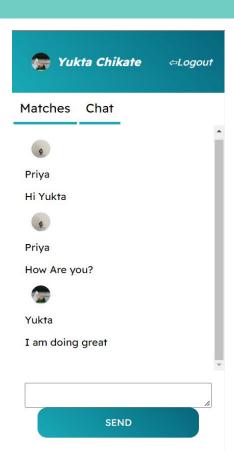

# Swipe Functionality Demo

Users can swipe right as finders and posters for a match or swipe left if they don't align with a match

## **Chat Functionality Demo**

The chat functionality helps the finder and poster connect and make a decision based on whether they are a perfect fit!

## Feedback Form
